                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 specification. The foetal polynucleotides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present sequence is a polypeptide encoded by a cDNA assembled using an expressed sequence tag (EST) found to be expressed in human

                                                                                                                                                                                 This invention describes a novel nucleic acid encoding a Hepatitis C Virus (HCV) truncation mutant of NSSB. The product of the invention has immunoprotective activity and can be used as a vaccine the NSSB mutant or a nucleic acid vector directing expression of the mutant, are used to induce an immunological response in a mammal. Antibodies against the NSSB mutant are used to protect mammals against diseases caused by viruses of the Flaviviridae. Additionally, soluble protein produced by the method would allow for determination of the structure of the protein via x-ray crystallography or other known methods. The HCV NSSB truncation mutant has a deletion of a hydrophobic tail which release the protein into the soluble portion of the cell, allowing for a greater recovery of soluble protein for screening for inhibitors of NSSB enzymatic activity. AAY25293-Y25322 represent the carboxy-terminus of the method of the inventions HCV genotypes which are used to desribe the method of the inventions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NS5B; antiviral compound; truncated protein; mutant; immunoprotective; vaccine; immunological response; protection; disease; Flaviviridae; virus; x-ray crystallography; hydrophobic tail.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-OCT-1999;

                                                                                                                                                                               of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03166 to AAH1363 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent

RESULT 12
CC cancers such as leukaemila and melanoma, immune system disorders such as carbona and diabetes mellitus, neurological disorders such as epllepsy and CC asthma and diabetes mellitus, neurological disorders such as epllepsy and CC Parkinson's disease, mental disorders such as schizophrenia and seasonal CC affective disorder (SAD), motor neuron disorders such as multiple sclerosis, CC central nervous system disorders such as mental retardation and CC neurofibromatcosis and neuromuscular disorders such as cerebral palsy and CC muscular dystrophy. Target polynucleotides in a sample can be detected by Typridising the sample with a probe sequence complementary to the target polynucleotide, under conditions in which a hybridisation complex is formed, and detecting the presence or absence of the complex. The CC polypeptides may also be used as antigens in the production of antibodies CC against secretory proteins and in assays to identify modulators of CC protein expression and activity. The antibodies may also be used as CC diagnostic agents for detecting the presence of the sequences of the complex is considered to the sequences of the sequences of the construction in samples e.g. by enzyme linked immunosorbent assay (ELISA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAU69468
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Liu TF, Ros

The polypeptides and their associated polynucleotides can be used in the treatment, prevention and diagnosis of diseases associated with inappropriate secretory protein expression. These diseases include with proliferative disorders such as atherosciencis and psoriasis, used in the procession of the province of the process of the proces

                                                                                                                                                                                                                              The present sequence represents human dlg-1 molecule. The present invention describes human discs large 1 gene (dlg) family expressible in nerve tissue. Also described are: (1) a polynucleotide (PN) encoding dlg and comprising a 3100 (I) or 3213 bp (II) sequence; (2) RNA corresponding to PN having sequences (I) and (II); (3) RNA having a base sequence translated by dlg; (4) an antisense PN having a at least 15 bp sequence, and which is a part of PN of (1); (5) a derivative of the antisense PN; (6) an antibody specific for dlg, and (7) an antibody specific for a polypeptide having a 817 or 849 as sequence. The polypeptide, RNA's and antibodies can be used for detection of dlg. The antisense PN can be used as a therapeutic composition for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   JP10066581-A

                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents tumour suppressor protein NE-dlg. The specification describes mammalian proteins, designated nedasin, which bind to the tumour suppressor protein NE-dlg. Nedasin is involved with the regulation of tumour suppression mechanisms. Nedasin and antibodies recognizing it are useful in the investigation of the mechanism of formation of malignant tumours. The polynucleotides are

The present invention describes human discs large 1 gene (dlg) family expressible in nerve tissue. Also described are: (1) a polypucleotide (PN) encoding dlg and comprising a 3100 (I) or 3213 bp (II) sequence; (2) RNA corresponding to PN having sequences (I) and (II); (3) RNA having a base sequence translated by dlg; (4) an antisense PN having a at least 15 bp sequence, and which is a part of PN of (1); (5) a derivative of the antisense PN; (6) an antibody specific for dlg, and (7) an antibody specific for a polypeptide having a 817 or 849 as sequence. The polypeptide, RNA's and antibodies can be used for detection of dlg. The antisense PN can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 8; Page 18-20; 31pp; Japanese.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB DB

SEEMS TO INVOLVED IN THE PROTEOLYTIC PROCESSING OF CYTOCHROME OXIDASE SUBUNIT 2. OXA1-2 IS ESSENTIAL FOR VIABLLITY WHEREAS OXA1-1 IS NOT. WHEN BOTH ARE DELETED THE CELL IS NON-VIABLE, THEREFORE OXA1-1 ACT AS A BACK-UP FOR OXA1-2. SUBCELLULAR LOCATION: Integral membrane protein. Mitochondrial

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB
